#### QUESTION 6

Refer to the exhibit.

The App-Dev team requests that IT provide them with a multi-cloud catalog where they can use self-service to deploy their own development workloads without needing to raise a work order with the IT team. The company security policy requires that users be granted the least privileges necessary to fulfill their role.

Within vRealize Automation (vRA), the administrator successfully updates the existing directory configuration to include the App-Dev-User group and then uses the Enterprise Groups feature to assign both organization and service roles to the App-Dev team. The administrator then logs into vRA, creates a dedicated App-Dev project and adds the appropriate development cloud zones, synchronizes the standardized blueprints from GitHub and releases them to Service Broker and configures the content sources so they show up in the service catalog. The administrator checks and is able to see the blueprints, and requests that the App-Dev team leader log in and access the catalog. The App-Dev team leader replies with the attached screenshot and requests more information about where to find the service catalog.

Which two actions should the administrator take within Identity and Access Management to resolve the access issue for the App-Dev team? (Choose two.)

- A. Change the assigned organization role to Member.
- B. Change the assigned organization role to Owner.
- C. Assign the Service Broker Administrator service role.
- D. Assign the Service Broker User service role.
- E. Assign the Cloud Assembly User service role.

Correct Answer: AD

#### QUESTION 7

An administrator for vRealize Automation configures the cloudConfig section of the machine definition in a blueprint. The templates to be used with the blueprint are properly configured to support cloud-init.

At which point in the provisioning process will the cloud-init code be executed?

- A. Upon first boot and during any day 2 restart operation
- B. Upon first boot and any time the blueprint is updated and re-applied to existing deployments
- C. Upon first boot of the virtual machine only

D. Upon first boot and again after a reboot which occurs during the initial provisioning of the virtual machine

Correct Answer: C
